Command	Usages
/batch	Analyse 10 files together, apply same refactor to many modules, process multiple user storied at once
/compact	Compress current conversation/context into a shorter summary to save token/context window. Very useful for long coding sessions, reducing claude usage cost. Preventing context window overflow
/context	Shows, manages, or injects current working context. Usually helps claude understand active repo, files loaded, task summary, memories/skills
/clear	Clears active conversation context/session memory. Useful when claude gets confused, switing projects, starts fresh
/debug	Enables deeper debugging mode. Usually makes claude inspect stack traces carefully, trace execution paths, identity root cause.
/rewind	Moves conversations/tasks state back to a previous step (Kind of undo operation)
/review	general code review model. Claude checks bugs, code quality, maintainability, readability.
/ultra-review	More exhaustive version of review.
/simplify	Refactors code into simpler form. It can reduce complexity, remove unnecessary abstractiond, improve readability.
/insights	provides high-level understandings. Instead of code changes, Claude explains, patterns, bottlenecks, architecture observations, improvement opportunities.
/unit	Generates or improves unit tests.
/model	Switch AI model
/usages	Shows token/API usages stats.
/feedback	Sends feedback/report about Claude behaviour.
/btw	Usually shorthand helper/info command ("by the way")
/loop	Runs iterative autonomus workflow
Esc + Esc	Brings back old conversation (Kind of cherry pick)
